

Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is actually a device made out of top quality materials intended to be able to withstand the most difficult procedures and work environments. This particular piece of equipment could enable the person driving to be able to control the blades hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the arms or the entire load in order to facilitate much more precise lifting and placement in a faster and much more efficient manner.

The only one of its kind blade pocket design could enable the one operating it to be able to securely swing the unit's blades without any worry of damaging the positioning cylinders. This can allow the worker the option to either perform simultaneous or independent blade movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be transformed into fork positioners on available units.
